Final project Proposal

For my final project, i will be making a wall paper that uses rain particle to make an interactive art that is a galaxy, more specifically the milky way galaxy, i will try to include some effects such as when you click on the mouse something will happen, as well as being able to choose what colors you want if possible. Also i will try to make the particles rotate

Git hub repository

[jcarlosv2002/galaxy-wall-paper-final-project: Here in this code, we will generate a wall paper of a galaxy where this rotating, there will be some effects where you can interact with the wallpaper, also giving the person the ability to change colors when clicking on the wallpaper](#)
